

1. Shorthand `border` Property

```
border: 2px solid red;
```

- **2px** → Border width
- **solid** → Border style
- **red** → Border color

2. Individual Border Properties

- `border-width`: Sets the width of the border.
- `border-style`: Defines the type of the border.
- `border-color`: Specifies the color.

```
border-width: 3px;  
border-style: dashed;  
border-color: blue;
```

3. Border Styles

The `border-style` property supports different styles:

```
border-style: solid;      /* Solid line */  
border-style: dashed;    /* Dashed line */  
border-style: dotted;    /* Dotted line */  
border-style: double;    /* Double line */  
border-style: groove;    /* 3D grooved effect */  
border-style: ridge;     /* 3D ridged effect */  
border-style: inset;     /* Inset border */  
border-style: outset;    /* Outset border */  
border-style: none;      /* No border */
```

4. Border on Specific Sides

You can apply borders to specific sides:

```
border-top: 2px solid blue;  
border-right: 3px dashed green;  
border-bottom: 4px dotted red;  
border-left: 5px double black;
```

5. Rounded Borders (`border-radius`)

To create rounded corners:

```
border-radius: 10px;
```
